

# Magnum Case History

**Project Name:** Pedestrian Boardwalk  
**Magnum Installer:** John Camden Construction Piercton, IN  
**Job Location:** Warsaw, IN  
**Project Type:** Magnum Helix Foundations

**Project Description:**

268 Light Duty Magnum Helix Piers were installed in a frozen lowland lake area to support a ¼ mile pedestrian boardwalk. The piers were installed in January through a layer of frozen soil to an average depth of 40 ft.. The final elevation of each pier was laser controlled, and the construction of the boardwalk followed immediately behind pier installation. The pier installation portion of the project was successfully completed in 15 working days.
