

Magnum Case History

Project Name: Target

Magnum Installer: Dwyer Companies
West Chester, OH
www.dwyercompanies.com

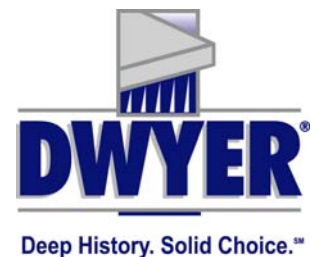

General Contractor: Elford Construction

Project Type: Underpinning, Steel Piering

Location: Cincinnati, OH

Project Description:

The 100,000 sq.ft department store project had two failed foundations on the north and south block walls, which caused both walls to roll outward. A total of 110 Magnum Steel Push Piers were installed on 250' of the south wall which settled 1.5", and 330' of the north wall which settled 2.5". The walls were successfully lifted, rolled inward and stabilized in 14 days. This remedial solution kept the project on track and saved hundreds of thousands of dollars in delays and replacement costs.

Underpinning, Steel Piering
