## Description

Magnum MHC1080-62024 tie-back cap has 191 tons ultimate capacity, 95 tons working capacity in compression and tension. The tie-back cap consists of a collar tube with bolt holes for connection to Magnum helical piles and thread bar for attachment to various earth retention structures. The tie-back cap is designed in accordance with ICC-ES document AC358 as well as IBC, ACI, and AISC codes. Design and detailing of the structure to which the helical pile cap is attached varies by project and is the responsibility of registered design professional including waler size (if any), bearing plate, wall facing (if any), and concrete cover as applicable.

### Installation Notes:

After installation of a Magnum Helical Anchor or Pile to the correct depth, torque, and capacity, begin by cutting-off the pile shaft at the proper elevation. For Bolted "B" applications, drill connection holes thru the pile shaft using a Magnum drill template. Install the pile cap, pile connection bolts, and snug-tighten nuts. For Welded "W" applications, plug weld cap in-place using the manufactured holes in the cap collar tube. Remove coatings from surfaces prior to welding. Snug tighten or post-tension thread bar nut against bearing plate as required for the project.
