

## MAGNUM Piering Announces 33,000-Square-Foot Facility Expansion to Advance Steel Fabrication Capabilities

Cincinnati, OH.— January, 2026 — MAGNUM® Piering is proud to announce a 33,000-square-foot expansion to its manufacturing facility, marking a significant investment in the future of engineered foundation solutions. The new building addition will house state-of-the-art steel fabrication equipment designed to enhance safety, increase production efficiency, and accelerate order processing for customers nationwide.

This expansion reflects MAGNUM®'s continued commitment to engineering excellence and manufacturing quality. By integrating advanced fabrication technology and optimized material flow, the new facility will allow MAGNUM® to produce critical foundation components with greater precision while maintaining the rigorous quality standards the brand is known for.

“Everything we do is engineered for strength and designed to support our customers in the field,” said Todd Paddock, VP. of Manufacturing at MAGNUM® Piering. “This expansion allows us to manufacture safer, more consistent products while improving lead times and responsiveness to project demands.”

Safety was a primary consideration in the design of the new space. The addition incorporates improved workflows, modern material-handling systems, and equipment layouts that prioritize employee safety and operational reliability. These enhancements support MAGNUM®'s long-standing culture of safety—strengthening not only its products, but also the environment in which they are made.

The new facility also reinforces MAGNUM®'s role as a trusted partner beyond manufacturing. Faster production timelines and consistent quality enable MAGNUM® to provide enhanced support to contractors, engineers, and project teams—both in the shop and on the job site.

### About MAGNUM Piering

MAGNUM® Piering is a leading manufacturer of engineered foundation solutions, providing helical piles, push piers, and related systems for a wide range of construction applications. With in-house engineering, advanced manufacturing, expedited production, and on-site support, MAGNUM® Piering delivers solutions that are engineered for strength and designed to support.
